

[Your Name]

AI Solutions Architect · Forward Deployed Engineer

[city, state] | [email] | [phone] | [linkedin / github]

SUMMARY

Self-directed technologist with 10+ years building and running a technology-led business end-to-end. Strengths in deploying AI and automation into real operations, integrating data across systems, and turning ambiguous problems into shipped software. Comfortable embedding directly with customers to translate workflows into working tooling — the core pattern of a Palantir Forward Deployed role.

EXPERIENCE

Founder / CEO — Self-Employed

Mar 2015 – Present

- Run a one-person technology and services business: own product direction, delivery, customer relationships, and back-office operations.
- Deploy AI and automation (LLM workflows, RPA, prompt engineering) to replace manual processes for clients and for internal operations.
- Build and maintain full-stack software and integrations across CRM (HubSpot), ticketing/PSA (ConnectWise), and data warehouses (Snowflake, Redshift).
- Stand up dashboards and reporting in Power BI and Excel against warehoused data to drive operating decisions.
- Administer IT infrastructure end-to-end: Windows servers, networking, firewall / IPS, VoIP, backup, and security hardening.
- Author SOPs, runbooks, and technical documentation so processes survive past the founder.

Manager — [Employer]

From Feb 2012

- Led a cross-functional team; owned performance management, staff development, and conflict resolution.
- Drove process improvement and standard-operating-procedure rollouts across the team.
- Coordinated project teams and resource planning to hit delivery targets.

Point Guard — Professional Basketball

From Sep 2009

- Competed at the professional level — point guard is, in practice, real-time decision-making, leadership, and orchestrating a team under pressure.
- Habits from this period (daily reps, film study, accountability) carry directly into engineering work.

Customer Service Clerk — Trader Joe's

From Mar 2008

- Front-line customer service in a high-throughput retail environment.

SKILLS

AI & Data: Generative AI / LLMs, prompt engineering, AI implementation, Python, Snowflake, Redshift, Power BI, dashboard development, log analysis

Software & Infra: Full-stack development, backend systems, APIs, build automation, debugging, software testing, server administration, IT infrastructure, computer networking, firewalls / IPS, system security, VoIP, Windows

Delivery & Ops: Cross-functional collaboration, project management, ClickUp, HubSpot CRM, ConnectWise, SOPs & technical documentation, process improvement, performance management, leadership, self-starter
